

Genio - A Cross Industry, Customizable Netezza Dashboard

Solution Overview

The GENIO toolset, built on Splunk, provides a single pane of glass for IBM PureData for Analytics (Netezza) performance metrics, utilization, and capacity planning. GENIO helps organizations determine how critical Netezza resource performance has trended both in real-time and over time (weeks, months, and years). GENIO facilitates proactive management of resource growth and service level management.

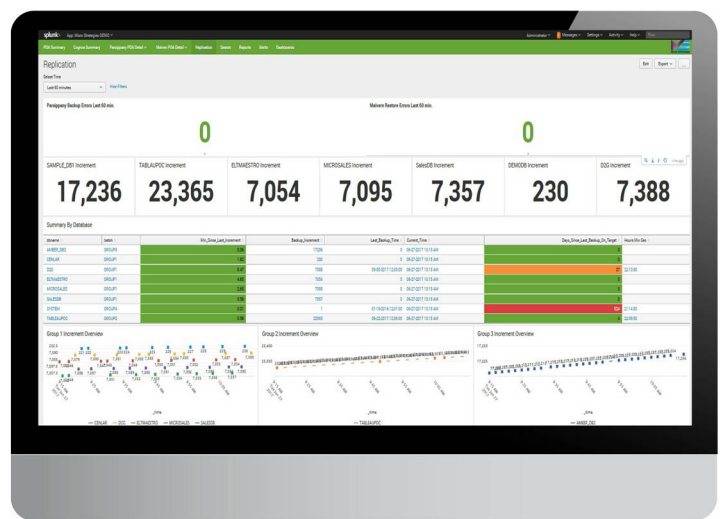

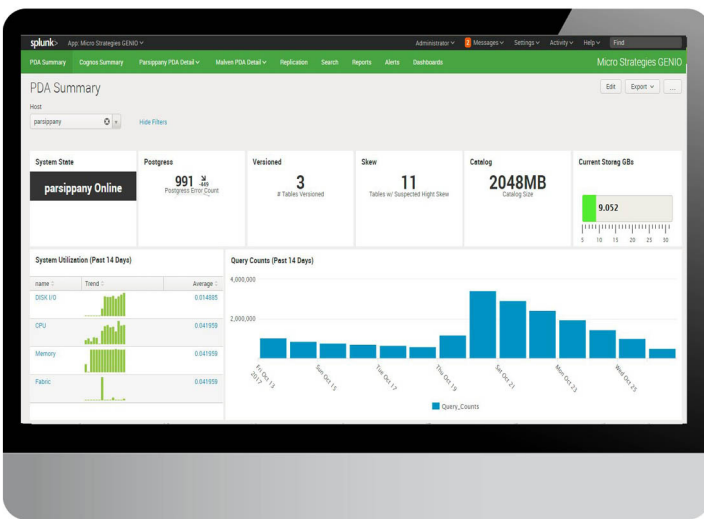

As a cross industry, customizable and scalable solution, GENIO features:

- Interactive exploration of current and historical system utilization
- GENIO +Replication: A simple and effective Netezza Replication Solution
- Resource trending & forecast of future system capacity needs
- Ability to identify high cost and poorly written SQL
- Query segmentation, database growth/usage by user & business unit (charge back capability)
- Pre-built components to monitor skew, versioned tables, catalog size and other KPI's

PDA Summary Dashboard

+Replication Dashboard

Micro Strategies Big Data and IOT practice focuses on building solutions that allow our customers to derive the greatest benefit from their internal and external data. As a result of our success, we were recently awarded Worldwide PureData for Analytics Partner of the year and IBM Top Business Partner, North America. With innovation centers, located in New Jersey and Pennsylvania, we offer clients a technology sandbox to test drive new solutions including Netezza, TwinFin, and the recently released IBM Integrated Analytics System (Sailfish).
