

IBM PureData Performance Analysis and Health Check Offering

An IBM Performance Analysis and Health Check Service is designed to examine and improve your PureData environment for better overall health and performance optimization. Micro Strategies provides a proactive approach to eliminate any scalability or performance issues due to changes in an organization's business, technology or growth initiatives.

Staying ahead of the performance curve allows your company to maintain your overall business foundation. Micro Strategies' team of experts, with over 100 years of combined experience, can ensure your data warehouse environment is optimized and running efficiently.

Our experienced team is ready to assist you and offers key analysis of your environment including:

- Risk assessment of applications, environment and processes
- Performance pain points
- Data distribution
- Gather system resources statistics
- Analyze query history and plan
- Review workload management
- Review critical applications
- Assess existing architecture and infrastructure

Goals of the Health Check:

- Achieve business-critical productivity and competitiveness
- Examine and improve data distribution and overall configuration for better optimization
- Establish project goals and expectations
- Maximize return on investment
- Reduce project delivery, complexity and risk
- Reduce total cost of ownership
- Long-term self-sufficiency

Findings and Recommendations:

- Micro Strategies will detail findings and risk assessment of your applications, environment, and processes
- We will deliver a comprehensive list of recommendations and a defined solution for your business requirements
- Our consultants will work side-by-side with your team to share best practices that will enable your team to independently optimize your PureData environment
- We will jointly develop a "Going Forward Plan" which will include prioritization of the recommended changes and guidance on how to implement those changes along with a schedule and resource plan
